

## Excel

## Tenacy

### File & data management

#### IMPLEMENTATION

⊗ You need to create and structure your tables from scratch.

✔ Right from the start, you get an **environment tailored to your needs**: everything is built for you!

#### CENTRALIZATION

⊗ You need to consolidate data spread over several files. And if you've managed to create a single file, it's likely to contain many tabs, making it unwieldy and difficult to navigate.

✔ You can **centralize all the data** from your IT ecosystem in a single platform.

### Intelligence & automation

#### COMPLIANCE

⊗ You need to build your own compliance action plans: Excel simply records your data without drawing any conclusions.

✔ You'll benefit from suggested compliance actions tailored to your situation: Tenacy includes over **40 cyber frameworks**, and tells you what you need to do to comply with them.

#### BEST PRACTICES

⊗ You need to look for new cyber practices to apply on the Internet or in your networks.

✔ You benefit from regular updates of the tool's recommendations in line with **new market best practices**.

### Security

#### RISK ANALYSIS

⊗ You have to carry out your risk analysis on your own. Excel doesn't tell you what to do, or what the results will be.

✔ You're guided through the various stages of your risk analysis, with the added bonus of **automatically generated risk matrices** for better visualization.

#### SECURITY POSTURE

⊗ You need to go to several different tools to assess your safety posture.

✔ You can objectively measure and monitor your security posture thanks to **native links between frameworks, security measures and indicators**.

### Reporting

#### RELIABILITY

⊗ You have to create your reports by copying and pasting, which can lead to errors.

✔ You get **automatically generated reports** based on your Tenacy data: 100% reliability!

#### TIME DEMAND

⊗ You need to spend a lot of time formatting your diagrams to present them to your collaborators.

✔ You can **generate your graphics in just a few clicks**, and even brand them with your corporate colors.
